The Complete
Package*

DK Packing's strengths

The Team. Our experienced, enthusiastic team enjoys working with our customers to understand and meet their needs. Our team is highly productive with complete flexibility between contracts, allowing us to accommodate significant volume variations from our customers.

Locations. The DK Group operates from a number of locations in both the United Kingdom and Europe.

The operations at Rugby and Coventry provide easy access to the M1 and M6 motorways enabling us to meet tight delivery schedules for a large geographical area, whilst our operations at Newcastle-under-Lyme and Basildon are positioned to provide Just-in-Time deliveries to major customers. Our German facility is particularly useful to customers sourcing product from the growing Eastern European markets.

Designers and Specifiers.

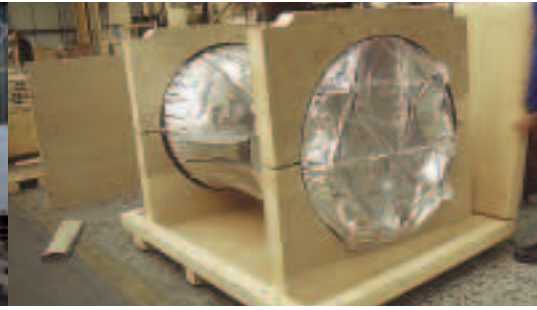

DK Packing has a team of qualified engineers capable of designing packaging for anything from a light bulb to a ship's engine. Our experience enables us to work with our customers to specify the optimum packaging to protect the product at minimum cost.

We are approved by the Ministry of Defence and are included in the Defence Packing Authority (D Pack A) Design Register DR14.

Systems. Our IT systems are key to our business. They are continuously developed and enhanced by our IT specialists. All of our customers' product is tracked on a real time basis through each stage of the process, from initial receipt through to dispatch, by use of bar coding, RF scanners and electronic control boards. Such complete traceability enables us to react to our customers' changing requirements and also allows our customers to link to our systems for up to the minute information.

Quality. DK Packing is accredited to both ISO 9001 and ISO 14001 and is fully committed to the use of 5S and 8D problem solving techniques to ensure our customers receive the high quality product they expect.

DK Packing has more than 30 years experience in contract packing and supply chain management, working with a wide range of customers, including many worldwide companies.

This experience enables us to ensure that our customers receive the right product, on a timely and cost effective basis, leaving them to concentrate on their core business.

Services include

- **Contract Packing** of industrial and automotive components, including Ministry of Defence, shrink-wrapping, kit packing and liquid filling.
- **Inventory Management**, including flexible short or long-term storage: receipt, handling and distribution of customers' product: Just-in-Time supply, material scheduling and sequencing: picking, decanting and labelling.
- **Pack Design** by our qualified engineers to ensure the optimum solution to commercial and MOD standards.
- **Packaging Procurement** by our purchasing department for competitive prices with minimal stockholding.
- **Casemaking** of wooden cases in our in-house mill provides bespoke cases with minimum time delay
- **Reverse Logistics**, processing product at the end of its life cycle to remove the product from the market and dispose of responsibly, a growing concern under recent legislation.
